Table 3. Prognostic Performance According to the Combination of Modalities

Clinical	Report	Image	Model	OS		PFS	
				C-index	*P*	C-index	*P*
✓	✓		Joint (concatenation)	0.715 ± 0.025	0.321	0.646 ± 0.019	0.883
✓		✓	Joint (concatenation)	0.671 ± 0.028	0.011	0.627 ± 0.032	0.065
	✓	✓	Joint (concatenation)	0.666 ± 0.053	0.019	0.628 ± 0.045	0.406
✓	✓	✓	Proposed (late fusion)	0.722 ± 0.033	Reference	0.647 ± 0.029	Reference

Mean ± SD of the C-index across the five test folds (n = 238); *P*, paired *t* test versus the proposed model. Joint, one end-to-end model on concatenated features; proposed, late fusion of the clinical–report model and the image model. OS = overall survival, PFS = progression-free survival, SD = standard deviation
